PRODUCT · TIIVII SUITE

Video surveillance

Every camera, from every site, on one screen.

A fully cloud platform, with no recorders or storage at the client's premises.

cinfo

THE CHALLENGE

Every site with its own recorder, password and app

Facilities grow, cameras multiply, and monitoring ends up split across isolated systems nobody watches at the same time.

01

Isolated systems

One recorder per site makes it impossible to watch several locations at once.

02

Ageing hardware

Recorders and disks to maintain, expand and replace at every facility.

03

Uncovered spots

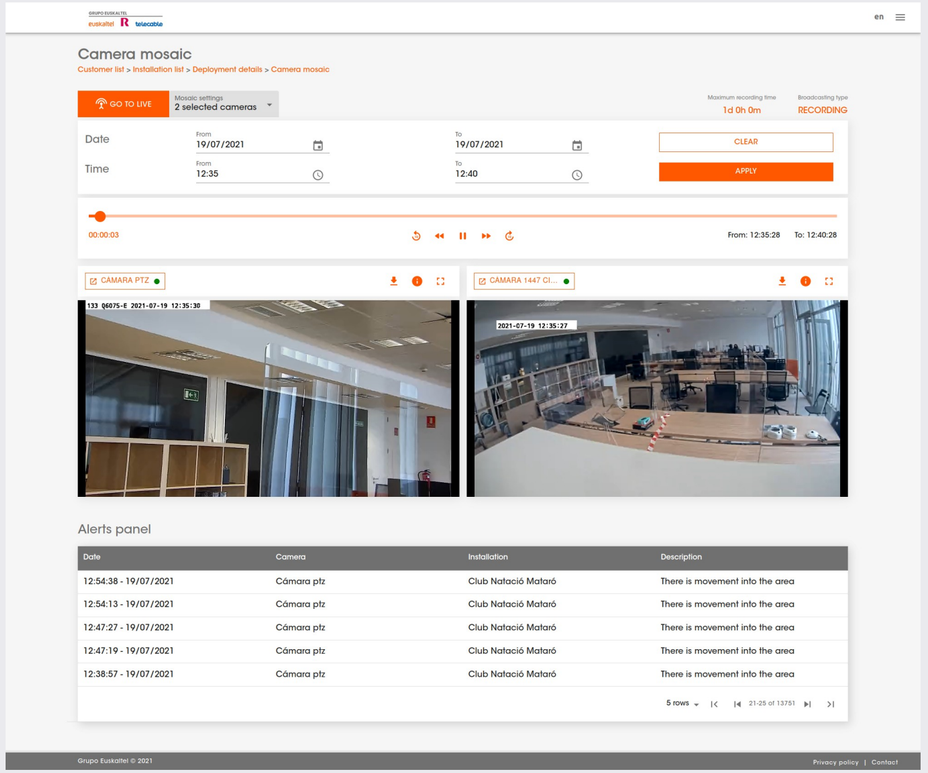

Building sites, events or emergencies where you must watch a place with no fixed infrastructure.

WHAT IT IS

Cameras at the sites, the whole platform in the cloud

The solution has two parts: capture, with automatic cameras installed at the client's locations, and playback and recording, with customisable cloud software reachable from any device.

- No additional storage hardware installed at the client's premises.
- Customisable mosaics with every available camera.
- Remote camera control and automated patrol routines.
- It meets video surveillance requirements under Spanish data protection law and the GDPR.

cinfo

HOW IT WORKS

Install, connect, monitor

The platform centralises sources from different locations and shows them simultaneously and in sync.

01

Cameras are installed

Fixed or PTZ cameras at each location, with power and data connectivity.

02

They connect to the cloud

The feeds go up to the platform, which takes over recording and storage.

03

The view is configured

Tailored mosaics, automatic patrols and per-camera alert thresholds.

04

You monitor from anywhere

Web access from any connected device, with users and permissions.

FEATURES

A platform ready to grow with you

- **Fully cloud**

  No recorders and no extra storage at the client's premises.

- **Distributed solution**

  Cameras in different locations centralised into a single monitoring view.

- **Configurable mosaics**

  Tailored grids for each operator's or shift's needs.

- **Immediate camera switching**

  Uninterrupted switching between feeds, at the same or different locations.

- **Manual and automatic control**

  Remote camera movement and scheduled patrol routines.

- **Alarms and alerts**

  A configurable alert system by camera, zone and time slot.

- **External sources**

  Non-tiivii cameras can be integrated into the same platform.

- **Mobile deployments**

  Monitoring points on portable mounts or mounted on vehicles.

BENEFITS

Centralised monitoring with no infrastructure investment

01

Less hardware to maintain

Storage and processing live in the cloud, not at each site.

02

One view of everything

Every location on the same screen, under the same access control.

03

Fast deployment

Adding a camera or a site is just connecting it: the platform is already running.

04

Regulatory compliance

Aligned with video surveillance requirements under data protection law and the GDPR.

INTEGRATIONS

With what you have installed and with what comes next

The platform integrates heterogeneous sources and connects with the rest of the tiivii suite.

Third-party cameras

Sources outside tiivii's own camera system.

Automatic production

A sports venue's cameras can be used for surveillance outside event hours.

Computer vision

Object detection, people counting and access control over the same cameras.

Mobile connectivity

Monitoring points over mobile data, with no civil works or cabling.

Vehicles and drones

Systems mounted on trucks and UAVs integrated into the same platform.

REST APIs

Camera provisioning, alert management and recording access from your systems.

HOW IT IS CONTRACTED

Per camera and per retention period

Single site

ONE FACILITY

- Fixed or PTZ cameras
- Cloud platform
- Configurable mosaic
- Recording with standard retention
- Multi-user web access

Installation + fee per camera

Multi-site

SEVERAL LOCATIONS

- All sites centralised
- Users and permissions per site
- Configurable alarms and alerts
- Automatic patrols
- Activity reporting

Annual fee per camera fleet

Mobile

EMERGENCIES AND EVENTS

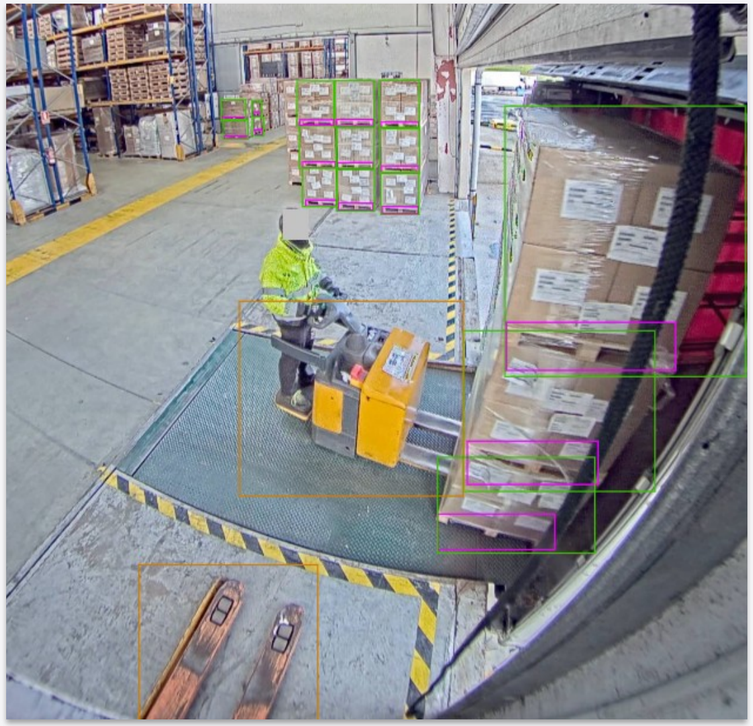

- Autonomous portable mounts
- Mobile data connectivity
- Vehicle-mounted systems
- Command-post mosaic interface

Tailored project

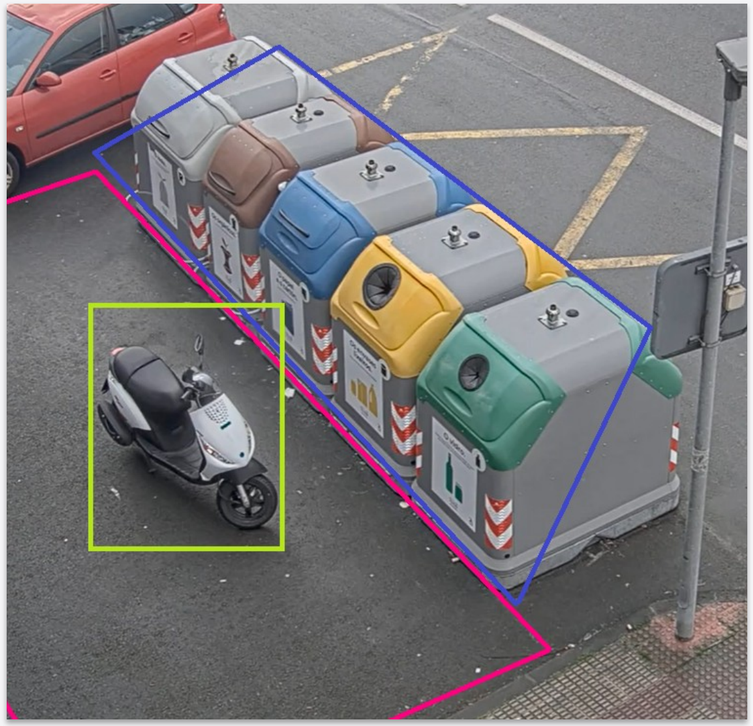

Indicative models. Price depends on camera count, resolution, days of recording retained and concurrent users.

GALLERY

Facilities monitored with tiivii

Monitoring of loading docks and logistics warehouses.

Occupancy and access control in car parks.

Urban cameras integrated into the same platform.

CASE STUDIES

From emergency response to the industrial estate

GALICIAN EMERGENCY AGENCY

Fire trucks and tethered drones broadcasting live

Trucks fitted with concealed wide-angle cameras and a 4G router, plus a tethered camera drone, integrated into a cloud platform for real-time information sharing.

https://cinfo.es

RFEP · SKATE PARKS

The same cameras broadcast and watch over

In La Nucía and Badalona the cameras produce the competitions and, outside opening hours, work as a security system against vandalism.

https://www.fep.es

LOGISTICS AND INDUSTRY

Loading docks and abandoned-object detection

Counting of boxes loaded and unloaded, detection of packages left on the dock or in the truck, and alerts to the warehouse manager and the carrier.

CINFO IN NUMBERS

A platform with no site limits

0

recorders to install on site

24 h

of autonomy on portable mounts

8K

maximum resolution per camera

1

single screen for every location

FREQUENTLY ASKED QUESTIONS

Common questions about cloud surveillance

Do I need a recorder at each site?

No. The solution is fully cloud-based: recording and storage sit in the cloud, so the site only needs cameras, power and connectivity.

Can I integrate my existing cameras?

Yes. The platform accepts sources outside tiivii's own camera system, centralising everything in one monitoring view.

Does it comply with data protection law?

The system meets the legal requirements for video surveillance systems under Spanish data protection law and the GDPR.

Can I monitor a site with no fixed installation?

Yes. There are portable mounts with up to 24 hours of autonomous power and mobile data connectivity, plus systems mounted on vehicles and drones.

Can patrols be automated?

Yes. PTZ cameras support remote manual control and scheduled patrol routines, with alerts configurable by zone and time slot.

Can I use the arena's cameras?

Yes, with an additional surveillance platform licence: the same cameras that produce events can watch over the facility when there is no activity.

WHO IT IS FOR

Who monitors with tiivii

01

Public administrations

Municipal facilities, public spaces and emergency coordination.

02

Industry and logistics

Plants, loading docks, perimeters and access control.

03

Sports facilities

Arenas and pitches that reuse their cameras outside event hours.

04

Ports and infrastructure

Moorings, car parks and transit areas under continuous watch.

LET'S TALK

Centralise surveillance across all your sites

We assess your locations and propose which cameras to install and how to centralise what you already have.
